

Econometrica Maintains Continued Operations During Coronavirus Pandemic

BETHESDA, MD, MARCH 16 – On March 13, President Trump declared a national emergency in response to the outbreak of coronavirus (COVID-19) nationwide. Econometrica, Inc., continues to monitor developments related to the coronavirus pandemic to ensure the safety of our staff, their families, and communities. We also are taking steps toward meeting our commitments to clients and partners and continue to provide the high-quality and timely services expected from Econometrica.

The following summarizes steps we have taken to date:

- Econometrica has mandated that all employees work full time from home for the foreseeable future. We are complying with guidelines from the Centers for Disease Control and Prevention (CDC) to halt gatherings of more than 50 people and to encourage social distancing.
- Employees working remotely have full access, using secure configurations, to Econometrica’s network resources, applications, and support, including communication tools to support telework. No project work will be interrupted by this move to a remote setup.
- Project teams in our Health, Housing and Community Development, General Services, Capital Markets, and Data Analytics groups are moving toward scheduling all meetings virtually and limiting travel. All business travel is temporarily suspended during this time.
- Staff members who work onsite at our clients’ offices continue to report to their respective agencies unless directed otherwise. We have been in contact with each client to develop contingency plans to address remote work should access to the client site be limited or an employee shows symptoms of COVID-19.
- We have regularly communicated prevention strategies and tips from CDC and the American Red Cross for keeping homes and workplaces safe. Everyone has been advised to call their doctors and follow CDC recommendations for self-quarantine should they show any symptoms related to COVID-19.

Coronavirus infections increase at an exponential rate, with symptoms including fever, cough, and shortness of breath. Social distancing seems to be effective in reducing the spread, and Econometrica wants its employees to feel safe and remain healthy. As this outbreak unfolds, Econometrica will continue to provide its high-quality services with no reduction in availability or commitment.
